RINK PRODUCTS

RINKPRODUCTS.COM

LIGHTER ON YOUR CREW.
EASIER ON YOUR BUDGET.

At least three to four times longer between sharpenings.

Stainless edge. 23 pounds. Drop-in fit.

Ships pre-sharpened and goes straight into the machine you already run.

Rinks report four to six weeks between sharpenings, against about weekly for a standard blade per the machine makers' manuals. Fewer trips to the sharpener is where the money is: about $3,400 to $4,200 saved per machine over two years in our cost model. Every input is on page 2.

Over 40 rinks run the Blue Blade.

> "Blue Blade has been outstanding for our rink. Cutting the ice is noticeably easier, the blade quality is superb, and we don't have to change them as often. Our entire ice crew loves them. Highly recommend."
>
> Unedited Google review, September 2026.

AT LEAST 3–4×

LONGER BETWEEN SHARPENINGS

Rinks report 4 to 6 weeks between sharpenings, against about weekly for a standard blade, per the machine makers.

58%

LIGHTER TO LIFT

23 lb against 55 at 77 inches. Easier to move on and off the machine, and cheaper to ship out for sharpening.

Fewer

BLADES IN STOCK

Rinks report keeping four to six standard blades in rotation per machine; with the Blue Blade, two per machine (one on the ice, one in reserve).

Drop-in fit. Same machine, same sharpening house, no modifications.

Tell us your machine.

We confirm the fit before you order.

The numbers

RINK PRODUCTS

Per resurfacing machine, in our two-year cost model. Purchase plus sharpening, at your local sharpening house.

TWO-YEAR COST PER MACHINE

BLUE BLADE SHARPENED	BLUE BLADE, 2 YR	STANDARD, 2 YR	YOU SAVE
Every 3 weeks The 3 to 4 times claim	$2,495	$5,846	**$3,351**
Every 4 weeks The claim, and what rinks report	$2,045	$5,846	**$3,801**
Every 6 weeks What rinks report	$1,645	$5,846	**$4,201**

The standard blade is sharpened weekly in every row.

MORE THAN ONE MACHINE

MACHINES	YOU SAVE, 2 YR
1	**$3,351 to $4,201**
2	**$6,702 to $8,402**
4	**$13,404 to $16,804**

STANDARD BLADE, WEEKLY — **104 trips**

BLUE BLADE, EVERY 4 WEEKS — **26 trips**

69 to 86 fewer trips to the sharpener over two years. Every one is a blade change, a handoff, and a blade you need a spare for while it is out.

EVERY INPUT

- Two years, or 104 weeks.
- Standard blade sharpened weekly, per the machine makers' manuals.
- Blue Blade sharpened every 3 to 4 weeks (the claim) or every 4 to 6 weeks (what rinks report; two Blue Blade customers report 50 and 80 cutting hours per edge).
- $50 a trip at the same sharpening house for both blades.
- One Blue Blade and two standard blades bought over two years, at 2026 prices. Standard blade prices are market-verified.
- Trips rounded up to a whole session.
- No freight: a local sharpening house.
- 77-inch figures. The 84-inch lands within about $35.

This is our model, not a promise. Your rink's numbers depend on your ice time and your sharpening house.

SPECIFICATIONS

Sizes	Made in a wide variety of sizes
Weight	23 to 25 lb · standard runs 55 to 65
Edge life	50 to 80 h per sharpen, customer-reported
Material	Rust-resistant stainless edge
Fit	Drop-in, no modification
Sharpening	Your existing house, unchanged
Ships	Pre-sharpened, ready to install

Fitment. Made in a wide variety of sizes for standard North American, European-built and wide-conditioner resurfacers. Sectional edge strips for stadium-class resurfacers are available on request, as is custom engraving. Tell us your machine and we will confirm the fit.

WEIGHT

Less than half the lift.

58% lighter at 77 inches. 25 lb against 65 lb at 84 inches.

At 23 lb the Blue Blade is far easier to move than standard steel, whether it is coming off the machine, going onto a bench, or heading out to the sharpening house. Spares take up less room on the rack and cost less to ship. The difference shows up on every blade change you make.

INVENTORY

Fewer blades on the shelf.

A blade at the sharpener is a blade nobody can use, so rinks buy spares to cover the gap. When that gap opens every four to six weeks instead of every week, a spare spends most of the season doing nothing. Rinks running the Blue Blade need **fewer blades in stock** than they did on standard steel. Less capital on a rack, one less thing to track.

CORROSION

Stainless resists rust.

Carbon steel rusts between uses, and rust is what quietly eats the edge life you paid for. Stainless construction resists it, so far less of that edge life is lost to rust.

Switching takes one order.

No machine changes. No new sharpening house. No retraining.

01 **Tell us your machine**
We confirm the blade length and fit before you commit to anything.

02 **Order how you like**
Online, by email, or by phone. Card or invoice, whichever suits you.

03 **We ship pre-sharpened**
The blade arrives with a clean edge already ground in, ready to cut.

04 **Drop it in and go**
It bolts into the conditioner you already run. Your sharpening house takes it from there.

Tell us your machine.

We confirm the fit before you order.
